Size (SF) 1 story
19,990 sq ft

Contract Delivery Method AIA format, at-risk
Contract Time 427 calendar days

Project Narrative

The Centra Amherst Medical Center is a new ambulatory care facility in the town of Amherst. The facility will provide much needed urgent and primary care medical services in an underserved community.

It contains 20 exam rooms, x-ray and procedure rooms, offices for four physicians and associated staff, as well as an ambulance entrance and physical therapy gym and support spaces. The facility is designed to be able to expand in the future and to add a helipad. It offers a large community room which will be able to be used by groups in the area for meetings and events.

Rock and unsuitable soils created 90 days of lost time but the project was still completed ahead of project schedule.
